

Tech Integration Tips & Tricks

As the Technology Integrationist at Freshwater, I am here to assist you in becoming more comfortable integrating technology into the day-to-day learning of your students.

I am here to:

- Help create a more effective classroom for students.
- Help determine which tools can help implement a lesson plan.
- Help learn how to curate resources using a digital tool to share with students.
- Help learn how to use digital tools to increase engagement in the classroom.
- Help learn how to digitally communicate with students and/or parents.
- Help learn how we can use digital tools to increase collaboration on a specific activity.

I would like to hear your ideas of what you would like to accomplish in your classroom so I can explore new ideas of how to help you reach your goal. If I do not know of a tool or technique that will help you and your classroom, I will do my best to find the help that you need. All you have to do is ask.

~Wendy~

Are you using technology for teaching or entertainment?

Blended Learning - a style of education in which students learn via electronic and online media as well as traditional face-to-face teaching. This is a way to use technology as an educational tool rather than a form of entertainment.

Blended Learning has many benefits but here are two examples:

- Frees up time for teachers to work individually with students who might be struggling or for classroom prep.
- Gives students a voice. Studies show students are more actively engaged when they are doing something they enjoy. Blended learning allows students to choose their method of learning based on their interests.

To learn more about blended learning please contact me, I would be glad to help you implement this into your classroom.
